## Panasonic

## FEATURES

1. Approved to the supplementary insulation class in the EN standards (EN60950).
The insulation distance between the contact and coil meet the supplementary insulation class of the EN60950 standards as required for equipment connected to the telephone lines in Europe.
Satisfies the following conditions:

- Clearances: 2.0 mm . 079 inch or more
- Creepage distance: 2.5 mm .098 inch or more

2. 3,000 V breakdown voltage between contact and coil. (Surge breakdown voltage $6,000 \mathrm{~V}$ type)
The body block construction of the coil that is sealed formation offers a high breakdown voltage of $3,000 \mathrm{~V}$ between contact and coil.
3. Nominal operating power:

High sensitivity of $\mathbf{2 0 0} \mathbf{~ m W}$
By using the highly efficient polar magnetic circuit "seesaw balance mechanism", a nominal operating power of 200 mW has been achieved.
4. High contact capacity: 2 A 30 V DC
5. High contact reliability achieved with gold-clad crossbar twin contacts and the use of gas expelling materials during formation.
*We also offer TX-series relays with AgPd contacts, suitable for use in low level load analog circuits.
6. Outstanding vibration and shock resistance.
Functional shock resistance: $750 \mathrm{~m} / \mathrm{s}^{2}$
Destructive shock resistance:
$1,000 \mathrm{~m} / \mathrm{s}^{2}$
Functional vibration resistance:
10 to 55 Hz (at double amplitude of
3.3 mm .130 inch )

Destructive vibration resistance: 10 to 55 Hz (at double amplitude of 5 mm .197 inch)
7. Sealed construction allows automatic washing.

## NOTES

## 1. Packing style

1) Tube packing

The relay is packed in a tube with the relay orientation mark on the left side, as shown in the figure below.

2) Tape and reel packing (surface-mount terminal type)
(1) Tape dimensions
(i) SA type
mm inch

Tape coming out direction
(ii) SS type

(2) Dimensions of plastic reel

3) Ambient temperature when transporting and during storage with the product in its original packaging:
-40 to $+70^{\circ} \mathrm{C}-40$ to $+158^{\circ} \mathrm{F}$

## 2. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

Chucking pressure in the direction A:
$4.9 \mathrm{~N}\{500 \mathrm{gf}\}$ or less
Chucking pressure in the direction B:
$9.8 \mathrm{~N}\{1 \mathrm{kgf}\}$ or less
Chucking pressure in the direction C :
$9.8 \mathrm{~N}\{1 \mathrm{kgf}\}$ or less
Please chuck the $\square$ portion.

Avoid chucking the center of the relay. In addition, excessive chucking pressure to the pinpoint of the relay should be avoided.
3. M.B.B. type

A small OFF time may be generated by the contact bounce during contact switching. Check the actual circuit carefully.
If the relay is dropped accidentally, check the appearance and characteristics including M.B.B. time before use.

Measuring condition of M.B.B. time

For Cautions for Use, see Relay Technical Information.

[^0]:    Note: In case of 5 V transistor drive circuit, it is recommended to use 4.5 V type relay.
