TL081

General purpose JFET single operational amplifiers

Features

- Wide common-mode (up to V_{CC}^+) and differential voltage range
- Low input bias and offset current
- Output short-circuit protection
- High input impedance JFET input stage
- Internal frequency compensation
- Latch-up free operation
- High slew rate: 16 V/µs (typ)

Description

The TL081, TL081A and TL081B are high-speed JFET input single operational amplifiers incorporating well matched, high-voltage JFET and bipolar transistors in a monolithic integrated circuit.

The devices feature high slew rates, low input bias and offset currents, and low offset voltage temperature coefficient.

2 Absolute maximum ratings

Table 1. Absolute maximum ratings

Symbol	Parameter	TL081I, AI, BI	TL081C, AC, BC	Unit
V_{CC}	Supply voltage (1)	±18		V
V_{in}	Input voltage (2)	±15		V
V_{id}	Differential input voltage (3)	±30		V
P_{tot}	Power dissipation	680		mW
	Output short-circuit duration (4)	Infinite		
T_{stg}	Storage temperature range	-65 to +150		°C
R_{thja}	Thermal resistance junction to ambient(5) (6) SO-8 DIP8	 125 85		°C/W
R_{thjc}	Thermal resistance junction to case(5) (6) SO-8 DIP8	 40 41		°C/W
ESD	HBM: human body model(7)	500		V
	MM: machine model(8)	200		V
	CDM: charged device model(9)	1.5		kV

1. All voltage values, except differential voltage, are with respect to the zero reference level (ground) of the supply voltages where the zero reference level is the midpoint between V_{CC}^{+} and V_{CC}^{-}.
2. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 volts, whichever is less.
3. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.
5. Short-circuits can cause excessive heating and destructive dissipation.
6. Rth are typical values.
7. Human body model: 100 pF discharged through a 1.5kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
8. Machine model: a 200 pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
9. Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to the ground.

Table 2. Operating conditions

Symbol	Parameter	TL081I, AI, BI	TL081C, AC, BC	Unit
V_{CC}	Supply voltage range	6 to 36		V
T_{oper}	Operating free-air temperature range	-40 to +105	0 to +70	°C

3 Electrical characteristics

Table 3. V_{CC} = ±15V, T_{amb} = +25°C (unless otherwise specified)

6 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.

8 Revision history

Table 7. Document revision history

Date	Revision	Changes
30-Apr-2001	1	Initial release.
27-Jul-2007	2	Added values for R_{thja} and R_{thjc} in *Table 1: Absolute maximum ratings*. Added *Table 2: Operating conditions*. Added automotive grade part numbers in *Table 6: Order codes*. Format update.
27-Jun-2008	3	Removed information concerning military temperature range (TL081Mx, TL081AMx, TL081BMx). Added missing order codes for automotive grade products and updated footnote in *Table 6: Order codes*.
