## 9、 JD43M06 Debugging precautions

- 1、 TFT products had been precision debugged,aged,tested with special instrument before shipment, so there's no need to adjust again.
- 2、 Before adjustment, pls correctly connect power and video signal.Should be turn off/on power and video signal for checking image situation repeatly.
- 3、 Because TFT module is a electronic product, pls pay attention to avoid anti-static.
- 4、 4.3"TFT- LCD PANEL is made of glass, pls place carefully to avoid breakage.
- 5、 Don't touch the Potentiometer's pin feet when you use the keyboard control the module. Because person have resistance, you will affect function of potentiometer when touch it.

## 10、 4.3"TFT- LCD PANEL Inspection standard:

Purpose: Establish the standard of PANLE for inspecting material & progress and for clients' inspection.

Scope: suitable for 4.3"TFT LCD product.

### Content:

10.1、 Inspection standard and method

10.1.1、 LCD display scar detection method and judge:

10.1.1.1、 Inspect vertically (or at 45°angle from left/right) under the light tube (the power is 20 W) in the distance of 30cm to the panel. If there is no scratch, it is "OK". Otherwise "NG".

10.1.2、 Inspection method and judgment of LCD display's black spot,white spot,color spot.

10.1.2.1. Inspection method

10.1.2.1.1、 Black spot: under status of denote light, pls place MASK to near the LCD black spots and then compare with the size through visual observation.

10.1.2.1.2、 White spot/color spot: under status of denote light, pls place MASK to overlay on white spot of LCD,judge that white spot(color spot) wether can hidden or not

10.1.2.2、 Division of LCD Panel

Note: A1 area: The center of the available area for the picture.

A2 area: The edge of the available area for the picture (around the central area)

10.1.3、 The inspection standard for the spots:

Spot Diameter(mm)		Acceptable range	
		A1 area	A2 area
<b>Black spot</b>	$d \leq 0.15$	Irrespective	Irrespective
	$0.15 < d \leq 0.3$	4	4
	$0.3 < d \leq 0.5$	2	3
	$0.5 < d < 0.8$	0	2
<b>White spot/ color spot</b>	$d \leq 0.15$	Irrespective	Irrespective
	$0.15 < d \leq 0.3$	3	3
	$0.3 < d \leq 0.5$	1	2
	$0.5 < d < 0.8$	0	1

Note: 1、 Size: average diameter= (max diameter+min diameter) /2

- 2、 Using information above as a standard in order to judge while the spot is are dense.
- 3、 Black spot/white spot: To judge the obvious spots through the change of voltage by comparison.
- 4、 Total amount of black spot/white/color spots:  $A1+A2 \text{ area} \leq 4\text{pcs}$ .
