

This dual SD adapter lets you use two SD cards in the Raspberry Pi, so you can switch between 2 different operating systems without having to change the SD card. The extended SD contact also allows the adapter to be used in conjunction with many housings in which the SD slot is accessible from the outside.

- Connections: microSD plug > 2x microSD sockets/slots (with push/eject function)
- For microSD cards
- Gold-plated contacts
- SD contact length approx. 20 mm
- Dimensions: 37 x 26 x 5 mm

**Important note:** SD cards must only be switched over once the Raspberry Pi has been disconnected from the power supply, otherwise read/write errors may occur!
