AM

Stepper Motor Driver

AM556-IO

Speed: 40~850 Subdivision: 200~25600 DC : 20~60V

## Product Image

## Overview

- Speed setting (within 40~850) subdivision setting: 200~25600
- Current setting (within 0.4~5.6A)
- IO constant speed control, analog control
- With overvoltage, undervoltage, overcurrent, and phase-to-phase short circuit protection function
- Signal input: single-ended pulse/direction
- Variable current control greatly reduces motor heating
- Photoelectric isolation, differential signal input
- With rising edge, falling edge, single and double pulse selection
- High response/high speed and low vibration, self-test function

## Characteristics

Input voltage	20~60VDC
Output current	0.4~5.6A ( PEAK )
Subdivision setting	16 subdivision settings
weight	200g
Signal current	6~16mA
Use environment	-5~50°C , Avoid dust and corrosive gas
Storage environment	-20~+80°C , Avoid direct sunlight

## Motor and power input

symbol	definition	Remark
B-	Stepping motor B-phase winding interface	/
B+	Stepping motor B+phase winding interface	/
A-	Stepping motor A-phase winding interface	/
A+	Stepping motor A+phase winding interface	/
VDC	20-60VDC	
GND		

When the offline enable signal is valid, the drive fault is reset, any valid pulse is prohibited, the output power element of the drive is turned off, and the motor has no holding torque.

## Control signal input terminal

symbol	definition	Remark
ENBL-	Enable negative input	Compatible 5V - 24V level signal
ENBL+	Enable Positive Input	
DIR-	Directional negative input	
DIR+	Directional Positive Input	
PUL-	Pulse negative input	
PUL+	Pulse Positive Input	
ALM-	Negative output of alarm signal	5V
ALM+	Positive output of alarm signal	

# Changzhou ACT Motor Co., Ltd

Alarm instructions			
Serial number	Number of flashes	Name	instruction
1	1		Over-current or phase-to-phase short circuit fault
2	2		Overpressure
3	3		Undefined
4	4		Open electrode or poor contact

Analog quantity control interface	
Name	Features
OUT-10V	Provide 10V voltage, 50MA current
AIN	Analog 0~10V speed control interface
EGND	GND

switch setting					
SW1	SW2	SW3	SW4	PEAK	RMS
OFF	OFF	OFF	OFF	0.4A	0.3A
ON	OFF	OFF	OFF	0.7A	0.5A
OFF	ON	OFF	OFF	1.0A	0.7A
ON	ON	OFF	OFF	1.0A	0.8A
OFF	OFF	ON	OFF	1.4A	1.0A

750	ON	OFF	OFF	OFF	20000
850	OFF	OFF	OFF	OFF	25000

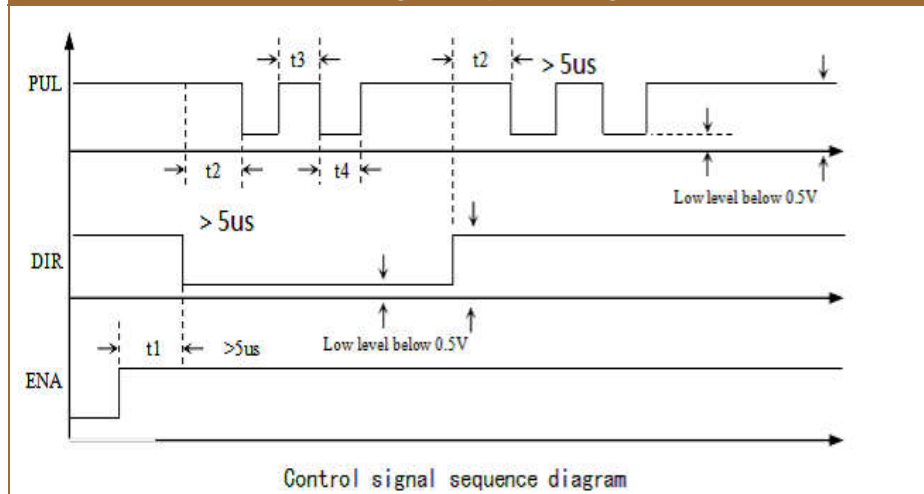

Function setting
SW9: Quiescent current setting off=50% ;on=90%
SW10: Filter time setting off=1.5ms; on=10ms
SW11: Enable axis lock state off=disable; on=enable
SW12: Alarm output status off=HI-Z; on=onstate
SW13: Pulse acceptance state off=Rise; on=
SW14: Drive control mode off=Pul+Dir; on=CW+CCW

Drive mode setting		
mode sel	SW15	SW16
Self Mode	ON	ON
IO Mode	OFF	ON
AI Mode	ON	OFF
PUL+DIR	OFF	OFF

Driver size chart

Control signal sequence diagram

**Note:**

T1: ENA (enable signal) should be determined to be high by a DIR of at least 5 µs. In general, it is recommended that ENA+ and ENA- be left floating.

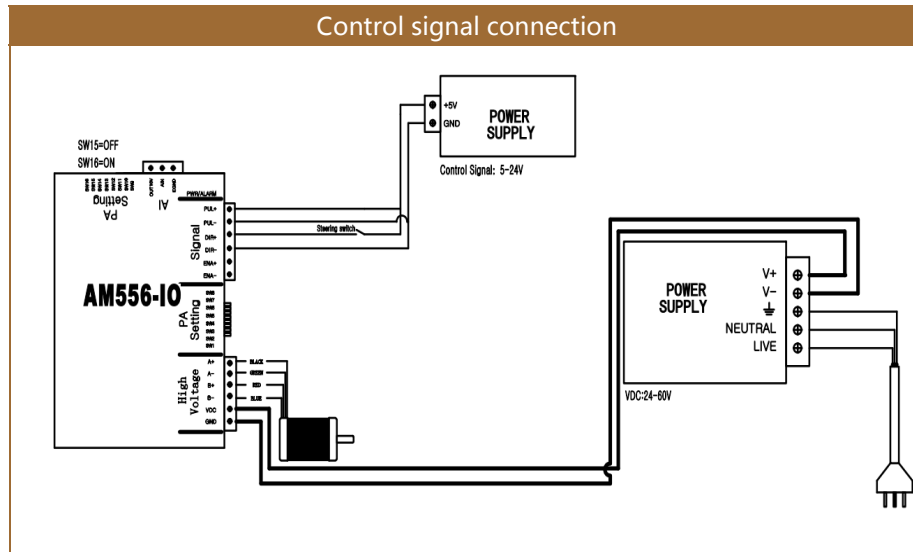

T2: DIR determines its state high or low at least 1µs along the PUL falling edge.

T3: The pulse width is at least not less than 1.5 µs.

T4: The low level width is not less than 1.5µs.

**Notice:**

There should be a space of 20mm around, and it should not be placed next to other heating equipment. Avoid dust, oil mist, corrosive gas, excessive humidity and strong vibration.

Problems and handle the law		
phenomenon	reason	solution
<b>The motor does not run</b>	Power light is not lit	Check the power supply circuit, normal power supply
	Motor shaft is powerful	The pulse signal is weak and the signal current is increased to 7-16mA.
	Subdivision is too small	Selective segmentation
	Current setting is too small	Selective current
	Drive is protected	Power on again
	Enable signal is low	This signal is pulled high or not
	Does not respond to control signals	No power
<b>Motor steering error</b>	Motor line is wrong	Any two wires of the same phase of the exchange motor (A+ A-exchange position)
	The motor line has an open circuit	Check and pick up
<b>Alarm indicator is on</b>	Motor line is wrong	Check wiring
	Voltage is too high or too low	Check the power supply
	Motor or drive damage	Replace the motor or drive
<b>Inaccurate location</b>	Signal interference	Eliminate interference
	The shield is not connected or not connected	Reliable grounding
	The motor line has an open circuit	Check and pick up
	Subdivision error	Set the subdivision
	Small current	Increase current
<b>Stall when the motor accelerates</b>	Acceleration time is too short	Accelerated acceleration time
	Motor torque is too small	Select a large torque motor
	Low voltage or too small current	Appropriately increase the voltage or current
