E-CORE™
LED Lighting

Lighting increases a sense of security and well being

Light is malleable and can therefore be varied according to our needs and our environment. Light enables us to plan by being a solution in itself for even the most tailored requirements - whether traditional or innovative, practical or emotional. Toshiba has been producing lighting for over 120 years. With our wide range of products, we offer the optimal solution for perfect light.

Our LED lamps and luminaires meet the highest standards thanks to their efficiency and functionality as well as their outstanding aesthetics.

Be inspired by this product brochure with the many ways to achieve your lighting solution.

CONTENTS

E-CORE LED Lighting

TOSHIBA
Leading Innovation

A 120 year history of success

- VERY LOW COLOUR TOLERANCE
- EXTREMELY LONG LIFETIME
- NO HEAT IN BEAM
- EXTREMELY LOW POWER CONSUMPTION
- HARMONIOUS LIGHT COLOURS
- NO UV OR IR RADIATION
- LEAD AND MERCURY-FREE
- INSTANT QUALITY LIGHT
- DIMMABLE* BETWEEN 10 AND 100%

Lighting technology from Toshiba

1875
Hisashige Tanaka founded the company Tanaka Engineering Works (Tanaka Seizo-sho), which was later renamed Shibaura Engineering Works (Shibaura Seisaku-sho).

1890
Ichisuke Fujioka founded the company Hakunetsu-sha & Co. Ltd., Japan‘s first incandescent lamp factory. It produced carbon filament lamps.

1899
Renamed Tokyo Electric Company (Tokyo Denki).

1939
Merger of the Tokyo Electric Company and Shibaura Engineering Works Co. Ltd. (Tanaka Seisaku-sho) in Tokyo Shibaura Electric Co. Ltd. - In short, Toshiba.

1940
Production of Japan‘s first fluorescent lamp.

1980
Production of the world‘s first compact bulb-shaped fluorescent lamp - the "NeoBall" - characterised by its low energy consumption rate.

2007
Development of the E-CORE LED Downlights - with a lamp life of over 40,000 hours. LED becomes a universal means of lighting.

2008
Toshiba‘s Environmental Vision 2050 seeks to harmonize the environment with a better future for people. Toshiba Lighting therefore announces the termination of the production of conventional light bulbs in 2010.

2009
Production E-CORE LED Lamp: LED enters a new market by becoming compliant with classical lamps.

2010
March 2010: termination of the production of incandescent light bulbs.

2012
Expand further in the european market thanks to a fixture line-up covering commercial lighting applications.

2014
Toshiba Lighting takes accent illumination one step further: the NEOACCENT Shoplights integrate perfectly into different indoor architecture and enable an optimized heat management.

Toshiba's environmental vision for 2050

"Improving our global eco-efficiency by 2050"

Do you believe it? At Toshiba, we do.

We are convinced that economy compliments ecology and that each corporation is responsible for the economical, social and environmental issues of its products.

One of many examples: after years of hard work, our LEDs use up to 80 % less energy than incandescent lamps.

Environment is our priority.

Welcome to Toshiba.

TOSHIBA eco style

LED: 3 letters for 1 solution

With such ambitious goals, Toshiba Lighting had to find means to produce much better light bulbs than incandescent and halogen lamps. This aim combined with economic and environmental issues: we blazed our path to the solution.

In the 70's, an LED was used as a coloured indicator or warning lights.

In 1996, we obtained white light LEDs.

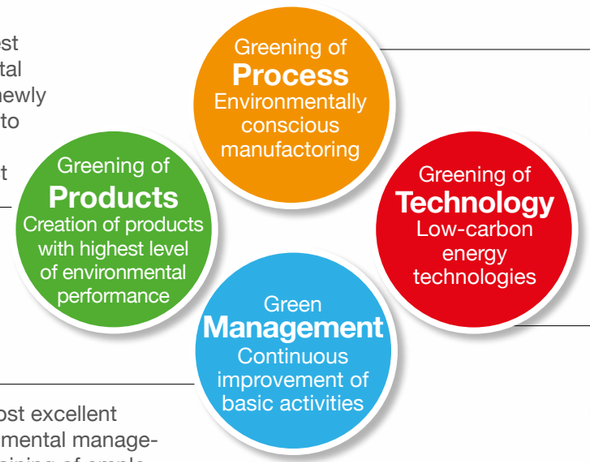
Today LEDs light large areas like museums, public places and parks to houses.

We began developing LEDs in the very early stages of the technology as we saw its potential for vast energy savings and long life. It was a gamble that we are now seeing a return on many years later. A true sign of our commitment to this innovative technology.

The four "Greens" and the management supporting them

Achieving the highest level of environmental performance in all newly developed product to reduce life-cycle enviromental impact

Aiming to be the most excellent company in environmental management through the training of employees and continuous improvement in environmental communications



Achieving one of the world's lowest levels of environmental impacts by reducing all manufacturing-related environmental impact

Contributing to provision of a stable power supply and mitigation of climate change through the low-carbon energy technologies

E-CORE LED Lighting

TOSHIBA
Leading Innovation

Who else but Toshiba!

Toshiba Lighting makes history

Back in 2008, we announced that we anticipated the end of the production of conventional incandescent lamps by 2010. And, as it happens we were right - with production completely shut down in 2010. Toshiba Lighting sees itself as the brand that researches, develops and manufactures with man and the environment in mind.

We have given a name to this consistent thought and action: Akari. Focus on the needs of people as well as thinking and acting sustainably. This is the driving force behind Toshiba‘s continuous innovation processes.

This shapes Toshiba E-CORE LED products and makes them unique and exemplary. Exemplary in: operating life, energy consumption, reduction of CO2 emissions by 80 % compared to conventional incandescent lamps, the range of the performance and colour spectrum and the resulting application possibilities. „Leading Innovation“ - in no other area is this claim of Toshiba more directly experienced than here.

E-CORE LED Lighting, your partner for the future

From the beginning, E-CORE LED Lighting was praised by a large public composed of retailers, professionals, architects and end users, as its 73% growth over last year shows.

Whether it be „a light to see“ for your general lighting or a „light accent“ for your shop displays, E-CORE LED Lighting will meet your needs.

Let’s discover our catalogue for 2014/15.
Just follow the light.

Why does everybody choose E-CORE LED Lighting?

Last year, hundreds of thousands of professionals and customers from the whole world chose our LEDs. How can we explain such a success?
Let’s ask them!

- Our LEDs last up to 60,000 hours without any maintenance
- Our LEDs use up to 80 % less energy than incandescent lamps
- Our LEDs withstand shock and vibration
- Our LEDs generate virtually no ultraviolet and no infra red
- Our LEDs can reduce CO2 emissions by 80 % compared to incandescent lamps
- Generate less heat thereby contributing towards lower air-conditioning costs
- A very wide range with many sizes and colours offering new creative opportunities

A very wide range for many different needs

With E-CORE LED Lighting, Toshiba wants to make as many people as possible benefit from its progress. For many years, our engineers worked altogether to develop our LED technology.

We are very demanding with ourselves in order to reach one goal: Answer all your lighting needs.

This catalogue is made for you.
Read it carefully: the future is under your eyes.

Leading Innovation

INDUSTRIAL

Lighten up your work

For industrial companies in particular, vision is key. That‘s why it‘s all the more important to use robust, high-performance light sources – such as Toshiba industrial lighting fixtures. They meet international standards and exceed your expectations. That‘s because they are durable, energy-efficient and low-maintenance, making them the most reliable industrial lighting fixtures of our time.

E-CORE LED WEATHERPROOF 2

The name says it all: designed to IP65, this robust diffuser luminaire is the ideal lighting solution for all areas with particular climatic or functional requirements. It is a replacement for T8 Lamp installations in warehouses, underground car parks, cold stores and other similar situations.

FEATURES

- Applicable lamp: E-CORE LED TUBE GX16t-5
- Dimmable: No (DALI dimmable on request)
- Electrical class: II
- Protection rating: IP65
- Power factor: > 0.9

E-CORE LED HIGHBAY 12000

Extremely robust, absolutely homogeneous and very efficient - the E-CORE LED HIGHBAY 12000 stands for up-to-date industrial lighting. With a luminous flux of ~11,000 lm, good light quality and UGR 20 and UGR 26 this tough luminaire is ideal for illuminating different functional areas. The E-CORE LED HIGHBAY is a suspended fixture for any use where robustness and long life time is a must.

Outdoor

Go with safety

No one likes to be in dark parking lots or on unlit roads. Yet, for cost reasons, many cities practice the nightly shutdown of street lighting or the sparse lighting of car parks and public facilities.

This need not be so. Toshiba offers absolute cost-efficiency with energy-efficient outdoor lighting, a very long life and excellent design. Toshiba outdoor lighting - making cities user-friendly.

E-CORE LED FLOODLIGHT 3000

Night-time lighting of buildings and other structures is a standard element of urban spatial design. This pivoting facade spotlight is the suitable tool for the job. Unbreakable, long-lasting and with an impressively uniform light output, it makes modern architectural lighting a reality. In figures, this represents upto 2,880 lumen at a power consumption of just 35 W and a nominal service life of 60,000 hours.

E-CORE LED FLOODLIGHT 5500

The swivelling architecture light called the E-CORE LED FLOODLIGHT 5500 ensures impressive, bright and thus very cost-effective lighting. You enjoy tremendous flexibility with your light design thanks to the large choice of lumen packages, three different colour temperatures and various beam angles. Furthermore, the constant luminous flux control over the entire operational life offers unvarying brightness.

FEATURES

- Dimmable: No / Yes (CLO)
- Electrical class: II
- Protection rating: IP65
- Power factor: 0.9
- Temperature range: -20 °C – +35 °C
- Constant lumen output (can be switched off if required)
- ENEC

Accessories for E-CORE LED FLOODLIGHT 3000/5500

These practical accessories are the perfect complement to the LED Floodlight 3000 and 5500 models. The ground spike is designed for securing the LED Floodlight to the ground, and provides a secure and stable support for all applications close to the ground. The wall-mounting boom is the ideal solution for securing the LED Floodlight to facades or buildings. With this boom, the LED Floodlight can easily be offset from walls at a 60 cm distance, providing perfect illumination. Both accessories are available in white or silver.

Recessed and Downlights

Light - as you like it

Anyone who wants to be able to use all possible means to save energy uses LED lighting solutions. In particular, our recessed luminaires and downlights inspire and save in many ways, because they are used almost universally - in large offices, classrooms, auditoriums, halls and corridors, shops and homes.

They combine an inspiring atmosphere of light, functional lighting and the highest energy and cost saving potential. A lighting solution could hardly be more complete.

DIMMABLE

DALI

NEOGRID

Energy efficiency on a completely new level – with up to 122 lm/W the LED Baselight NEOGRID outranges even modern fluorescent lamp technologies. DALI controllable lumen packages of up to 3,650 lm combined with excellent light quality and compliance to the EN 12464 make this unobtrusive louvre luminaire the perfect solution for today's office environments. All this is rounded off with a comprehensive product line-up, offering optimized flexibility and meeting various application requirements.

FEATURES

- Dimmable: Yes / DALI
- Electrical class: I
- Protection rating: IP20
- Power factor: > 0.9
- ENEC
- White or aluminium specular reflector surface
- DC capability: Yes

E-CORE™ LED Lighting

E-CORE LED DOWNLIGHT 3000

Event centers, conference rooms, cinemas – large spaces with sophisticated lighting design set the stage for this powerful downlight. Its compact dimensions and DALI controllability make it a convenient replacement for up to 2 x 32 W compact fluorescent and 1 x 35 W HID systems. Furthermore, a choice of different beam angles and UGR versions offers great flexibility and enables the use in various application fields – always optimally fulfilling the respective lighting task requirements.

E-CORE LED DOWNLIGHT 6000

Brilliant, controllable light even with high ceilings: the DOWNLIGHT 6000 is the contemporary replacement light for areas where 70 W HID were traditionally used. High foyers, large auditoriums, open staircases or shops – with up to 5,800 lumen this effective powerhouse covers all the bases in lighting design for public and commercial buildings.

FEATURES

- Dimmable: Yes / DALI
- Electrical class: II
- Protection rating: IP20
- Power factor: > 0.9
- Temperature range: 5 °C – 40 °C
- 2 drivers have to be ordered separately

E-CORE LED BANKLIGHT

The basis of the DALI dimmable E-CORE LED BANKLIGHT is the E-CORE LED DOWNLIGHT 6000. Integrated into robust housing, simple surface mounting is possible. On account of its high light intensity and its long service life, the E-CORE LED BANKLIGHT is good for lighting in shopping malls, theatres, industrial plants or entryways.

FEATURES

PACK Series

Ready for the good light

Interior designer popular classic: when it is not the luminaire but the light that is key, the Toshiba PACK Series products are ideal for restaurants, shops, and for hall or room lighting.

They can be integrated into the wall or ceiling, swivelled and dimmed at will, and have a wide beam angle or spot light depending on the application.

PACK omni mini 2

Small, efficient, simple – the all new PACK omni mini 2 opens up great opportunities for design integration and the easy step to efficiency, light quality and flexibility. Featuring the next generation of GX53-1 lamps, this compact downlight now appears in minimalistic dimensions, still with fixed and adjustable versions. The PACK omni mini 2 can replace up to 1 x 18 W conventional downlights and offers a replaceable light source – making it the easy and future-proof choice for energy saving in many applications.

FEATURES

- Applicable lamp: E-CORE GX53-1
- Dimmable: No
- Electrical class: II
- Protection rating: IP20
- Power factor: 0.55
- Temperature range: 5 °C – 35 °C
- Fix and adjustable (30°)

E-CORE™ LED Lighting

PACK omni 2

The classic downlight, reinvented. With its unobtrusive white housing, wide beam angles and powerful luminous flux, the PACK omni 2 is a suitable replacement for compact fluorescent lamps up to 2 x 26 W and a good allrounder in all secondary areas of buildings. What's new: the redesigned PACK omni 2 comes in two sizes and incorporates the next generation of the Toshiba LED LIGHT ENGINE – a light source that can be replaced in an instant and now offers 2,200 lm and DALI controllable versions (on demand).

FEATURES

- Applicable lamp: E-CORE LED LIGHT ENGINE 2
- Dimmable: No / DALI controllable types on demand
- Electrical class: I
- Protection rating: IP20

E-CORE™ LED Lighting

TOSHIBA
Leading Innovation

PACK accent 3

This miniaturized downlight range features the latest Toshiba PAR16 lamps and offers great flexibility for an attractive accent lighting in various application fields. Where in the past halogen lamps up to 50 W have been widely used, now this simple but highly efficient 5.4 W LED solution makes an appropriate alternative - convincing through brilliance, precise beam angles, excellent light quality and a very long lifetime of 40,000 h. The lighting head can be swiveled by 30°, allowing to target the light where it is needed, different beam angles and housing colours round off the portfolio.

FEATURES

- Applicable lamp: E-CORE PAR16
- Dimmable: Yes / Phase control
- Electrical class: II
- Protection rating: IP20
- Power factor: 0.64
- Temperature range: 5 °C – 40 °C

Spotlights

I want to see just that

To specifically set the scene, to put the focus on what deserves it, to emphasize what is important - these are the strengths of the spotlight.
Our spotlights are highly-efficient products for effective lighting effects - from subtle to obvious.

Their broad functionality and excellent design give you a great deal of leeway in the design of your spaces.

NEOACCENT Tracklight

Dynamic design, powerful accents, full flexibility - the NEOACCENT series offers everything to enable a timeless, high quality accent illumination with LED. The tracklight convinces through its discrete streamline look that perfectly integrates into different indoor architecture and enables an optimized heat management. With lumen packages of up to 2,600 lm the NEOACCENT series can efficiently replace 20 W and 35 W HID systems.

FEATURES

- Dimmable: Yes / Control on gear box
- Protection rating: IP20
- Temperature range: 5 °C – 35 °C
- Driver included in gear box
- Lighting head rotates 355°, pivots 90°
- With 3-circuit universal adapter

NEOACCENT Extractable

Individual shop architectures, diverse colour concepts and different ceiling designs: NEOACCENT Extractable recessed spotlights, with their two different colour temperatures, three housing colours and optional High CRI Filter, can be integrated perfectly into any retail space. Meanwhile, the light head‘s ability to be rotated and pivoted ensures optimum flexibility, even where space is limited. In addition, the Extractable spotlights can always be combined with the other products in the NEOACCENT series to create integrated lighting concepts.

FEATURES

- Dimmable: Yes / DALI
- Protection rating: IP20
- Temperature range: 5 °C – 35 °C
- Independent driver included
- Lighting head swivels out 45°, rotates 360°

E-CORE LED TRACKLIGHT 1200

This elegant spotlight range stands for demanding lighting solutions with its high-tech components. Whether for the high-quality presentation of goods or for displaying art, the spectrum of different colour and reflected beam characteristics offers exemplary creative leeway. The excellent colour reproduction makes it a suitable substitute for previous applications of 20 W HID lamps. As a chip-on-board design, the appealing eye-catcher ups the ante in the quality stakes with a multi shadow-free spotlight, the greatest power density and optimised thermo-management.

FEATURES

- Dimmable: No
- Electrical class: I
- Protection rating: IP20
- Temperature range: 5 °C – 35 °C
- ENEC
- Twist & Lock cover
- With 3-circuit universal adapter

GIMBAL RECESSED SPOT111

As a logical addition to the TRACK SPOT the RECESSED SPOT111 is the perfect downlight insert solution. It creates a discrete lighting architecture – even with low ceilings – and allows you to design the ceilings whichever way you like. The modular structure of this system has room for up to three spots. In this way you create an individual, friendly and balanced lighting atmosphere in shops, hotels and restaurants.

FEATURES

Lamps

LED - lighting for all moods

It is time to change because conventional incandescent lamps are a thing of the past. With the modern E-CORE LED lamps from Toshiba, you can create the atmosphere you want in the private and commercial sector - indoors and outdoors.

With all the advantages that LED lamps offer you:

- Very low energy consumption
- Extremely long life
- Low heat production
- Shock and vibration resistant

E-CORE LED Lighting

TOSHIBA
Leading Innovation

E-CORE GLS WIDE 13W

With 1,060 lumen, Toshiba‘s design classic is way ahead from an aesthetic and performance perspective. As a lamp with an intense beam of the retrofit segment, it is the substitute for all fields of application of 75 W bulbs. Its broad reflected beam angle makes it the ideal light source even for large rooms – in brief: powerful, elegant and unbeatably efficient.

E-CORE LED Lighting

TOSHIBA
Leading Innovation

This concerns all of us:

Energy efficient lighting solutions

It is time to upgrade

All over the world, solutions are being sought for efficient use of energy. One key area is lighting. In Europe, its share in total energy consumption is about 14%.

Already back in 2008, Toshiba announced the cessation of the production of conventional incandescent lamps because their energy efficiency is too low - they only reach efficiency classes D, E, F and G.

And in 2010, Toshiba actually ceased manufacturing incandescent lamps worldwide.

Since then, we have replaced incandescent lamps with modern LED lamps in almost all areas of lighting. Their low energy consumption and optimal light quality and excellent design make the transition so simple.

No matter where you need light, there is an energy-and cost-saving solution using Toshiba LED lamps and luminaires. Check for yourself, because this is the only way we can achieve the ambitious goals of energy reduction.

So simply take advantage of LED

Save on the cost of electricity - with our LED lamps and luminaires, this can be up to 85%.

Your investment will pay for itself sooner than you think. Modern LED lighting solutions offer a very long operating life. They pay for themselves over a very short period of time.

You also avoid the heat of conventional incandescent lamps. And, depending on the number of incandescent lamps used, this reduces the need for additional cooling.

And, you reduce unnecessary CO2 pollution of our environment.

Thus, we are in a position to do something ourselves - for ourselves and for the environment.

Let‘s enter our world!

Watts vs Lumen

Did you know?

What are Lumens?

Lumen (or Luminous flux) is the standard measure for the mount of light emitted by a light source.

Unlike light intensity (Candela), Lumens is a measure of the amount of light rather than its intensity.

How do I compare incandescent lamp using Lumens?

Using the table below you can see the Lumen values to be reached by LED Lamps and their incandescent equivalent (for non-directional lamp, as defined by EC244/2009).

Equivalence ratings for non-directional lamps (EC244/2009)

Rated lamp luminous flux ϕ [lm]			Claimed equivalent incandescent lamp power
CFL	Halogen	LED and other lamps	
125	119	136	**15 W**
229	217	249	**25 W**
432	410	470	**40 W**
741	702	806	**60 W**
970	920	1,055	**75 W**
1,398	1,326	1,521	**100 W**
2,253	2,137	2,452	**150 W**
3,172	3,009	3,452	**200 W**

Watts vs Lumens – Which should I use?

Lumens are the new way to measure and compare the light output from a lamp. Wattage is a measure of power consumed not light delivered. As lights are designed to emit light, the correct measurement is Lumen.

With LEDs it is not necessarily the wattage that tells you if it is more powerful than another LED lamp. Two LED lamps with the same wattage could have different Lumen values. To adequately compare the two lamps it is best compare Lumen output.

LED offers a true alternative to incandescent lamps and the drawbacks of other existing technologies.

LED lamps last longer, are more efficient, can be dimmed, and switch on instantly.

Reflector Lamps

The freedom to set the tone

Lighting offers so many possibilities for the illumination of spaces, scenes and objects. With the rich variety of our reflector lamps, you can set the tone you want.

Whether as a ceiling or wall spotlight - Toshiba reflector lamps are available with various beam angles at the desired lighting levels and with plug-in or bayonet plugs. Just as you please.

E-CORE PAR16 9W

These elegant mains voltage spotlights with robust GU10 base shine with their excellent energy-saving credentials and ease of use. Suitable for a multitude of uses, they can be dimmed to offer atmospheric lighting or daylight-brightness accents – even at considerable distance. That is in brief the best-in-class lumen and light quality in the GU10 world.

Commission Regulation
EU No 1194/2012

The Ecodesign Directive

Europe is taking another step on the road to an energy-efficient future. With this purpose in mind, the EU issued the ErP Directive 2009/125/EC for energy-related products in 2009.

The Directive also outlines the changeover from non-directional lighting such as light bulbs for private use to energy-saving alternatives. Commission Regulation EU No 1194/2012 has been in force since September 1st 2013.

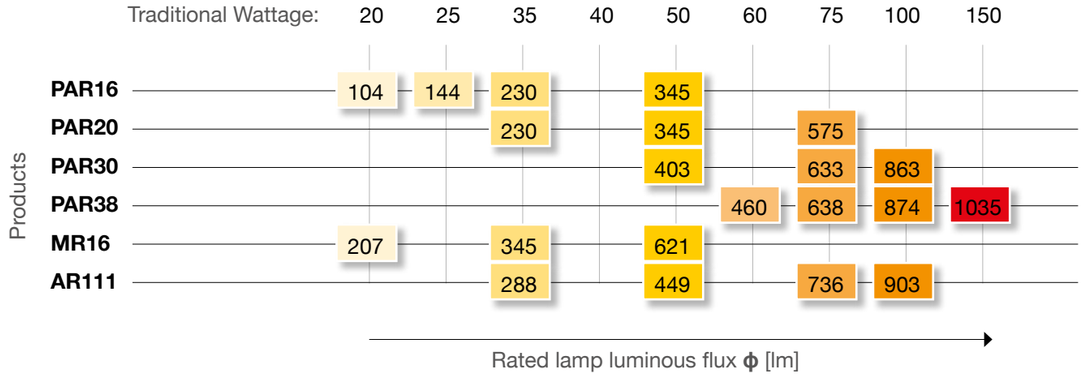
This Directive introduces regulations for lamps with directional light and comes along with a new one for lamp packaging (EU/874/2012). The focus of the ErP Directive is our environment and the best way to look after it.

It is up to all of us to live up to this ambitious objective, which is why the EU is giving this responsibility to both consumers and manufacturers.

With its lamps, Toshiba is offering a range of products that is 100% ErP-compliant. All our products already hold the „greenest" energy efficiency ratings, A, A+ or A++.

Even though the consumer will have to get used to working with different units - lumens instead of Watts - the new Directive will make a considerable contribution to the ecological protection of our environment. We are pleased to be making this journey with you.

Equivalence table for directional lamps



The energy efficiency label, in force since September 1st 2013, introduces the two new energy efficiency ratings A+ and A++. The older, lower classes F and G have been discontinued.

TOSHIBA
Leading Innovation

Modules

Optimal lighting conditions, minimal energy consumption.

In public spaces in particular, such as offices, presentation areas, and production sites, LED technology provides an important contribution to the environmental friendliness of your company. Here, Toshiba has just the right solution for every requirement – LED modules that can be easily integrated into your lighting system.

Depending on your requirements, these also come with dimmer drivers, allowing you not only to adjust your lighting conditions but also to optimise your heat management. No matter which solution you opt for, with our LED modules you not only provide the best possible lighting conditions for your company but also contribute to climate protection.

E-CORE LED TUBE GX16t-5

An innovation is conquering offices, presentation areas, and production sites.

Toshiba leads the field when it comes to environmental protection. So it is no surprise that the E-CORE LED TUBE GX16t-5 impress through top performance and are competitively priced.

It‘s the ideal time for a switch-over – don‘t you think?

Every feature of the E-CORE LED TUBE GX16t-5 represents a good investment:

- Their 40,000-hour lifespan is double that of conventional fluorescent lamps.
- An external LED driver ensures especially high performance.
- The modules can be easily integrated into your existing lighting system.
- They impress thanks to an approximately 1.7 x greater lumen output than conventional LED lamps with integrated drivers.

THE LED evolution for professionals.

The E-CORE LED TUBE GX16t-5 are more than just a competitively priced entry-level model. Their output and optimal performance are just as impressive as other innovative LED concepts from Toshiba. And because their fittings are identical to those of conventional fluorescent lamps, using them is particularly easy.

Do you wish to present your sales area in an impressive way? This is also easily achieved with the E-CORE LED TUBE GX16t-5, because they are available in all lengths and a great variety of colours.

The choice is yours! Choose modern LED technology that is durable, highly efficient, and that features full luminance immediately after being switched on.

External LED driver

E-CORE LED Lighting

TOSHIBA
Leading Innovation

E-CORE LED TUBE GX16t-5

The E-CORE LED TUBE GX16t-5 is the perfect linear module to upgrade the linear fluorescent fixtures to LED. This module has been designed for manufacturers willing to implement LED technology at an affordable cost. Available in all lengths and many colour temperatures of traditional linear lamps, it enables to keep the same fixture bodies and makes the switch to LED very easy. As it works with a separated Toshiba driver, the light flux can be dimmed and it prevents from many disadvantages of other solutions like heat management or over load risks.

Toshiba LED LIGHT ENGINE

A revolutionary new LED light source designed around the LED to maximise performance and efficiency

LED LIGHT ENGINE enables you to make choices with your lighting, and change your mind later.

This interchange ability allows you to extend the possibilities of your lit space and easily change the look and feel of the room depending on what you are lighting.

LIGHT ENGINE is a lamp in the traditional sense of the word.

- **You don‘t need to attach a driver.**
- **You don‘t need to add optical controls.**

Concept

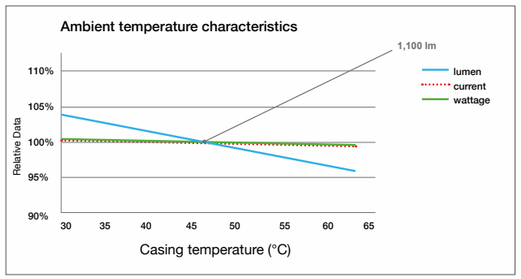
LIGHT ENGINE from Toshiba has been designed as an evolution to conventional lighting to maximise the potential of LED and provide long life, high efficiency, instant light and higher luminous flux.

LIGHT ENGINE is a new generation of replaceable light sources, using LED. Just as you would replace your fluorescent tube, the LIGHT ENGINE too can be replaced or exchanged. This means that you do not have to replace the entire luminaire should the LED fail but simply untwist the old lamp and replace it.

Design for Life and Efficiency

Without effective thermal management, LEDs will not operate well and could fail prematurely or operate inefficiently. The LIGHT ENGINE has been designed to take all that worry off your shoulders.

With its 40 mm cross-sectional silicon heat pad, the LIGHT ENGINE ensures that all the heat generated is driven directly to the heatsink, away from the LED chip.



Note: The values above is the relation of Tc and engines´s specifications where the product is turned on the following conditions:
· the input voltage is 230 V
· base-up positioned

LIGHT ENGINE uses a special connector that presses the LIGHT ENGINE‘s silicon heat pad down with exact pressure to the heatsink to ensure a good thermal connection with no air gaps.

LIGHT ENGINE offers 40,000 hours of life (L70), that‘s up to 4 times longer than CFL, dramatically reducing maintenance costs.

Delivering 91 lm/W, the LIGHT ENGINE offers high light output without draining your wallet. Combined with its dimming capabilities, the LIGHT ENGINE is the perfect choice for efficient, flexible, low energy lighting.

Reduce Investment Risk

TOSHIBA LED LIGHT ENGINE is a future-proof solution. Indeed through this engine, we created a new standardized socket: GH76p-5.
Thus, the LED engine becomes a lamp allowing end-users to upgrade their luminaires with the latest technology.

E-CORE™ LED Lighting

TOSHIBA
Leading Innovation

E-CORE LED LIGHT ENGINE 2

The unusual LED LIGHT ENGINE 2 from Toshiba offers creative users unlimited opportunities for a large number of lighting solutions. Depending on the application, you have a choice between different beam angles and luminous fluxes. The LIGHT ENGINE 2 is easy and safe to assemble.

GLOSSARY

DIMMABILITY

Dimming of lights

DIMMABLE

LED lights can be dimmed without sacrificing light quality. This is the main difference from lights fitted with fluorescent or high-pressure discharge lamps. Dimming also saves more energy. There are different types of dimming.

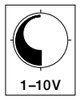
DALI

DIMMABLE

Luminaires are controlled by the digital DALI (Digital Addressable Lighting Interface). This standard, adopted by all manufacturers, overcomes the disadvantages of the 1 – 10 V principle and is being used increasingly, particularly in more complex installations. DALI offers a two-wire line that is protected against polarity reversal, with noise-resistant digital signal transmission, direct addressability, compact instruction set, error feedback and defined brightness values which are independent of line length. DALI is also supported by building and light management systems.

1 – 10 V

DIMMABLE



Luminaires can be dimmed via the 1 – 10 V interface. A voltage level between 1 V and 10 V is converted into corresponding lamp brightness.

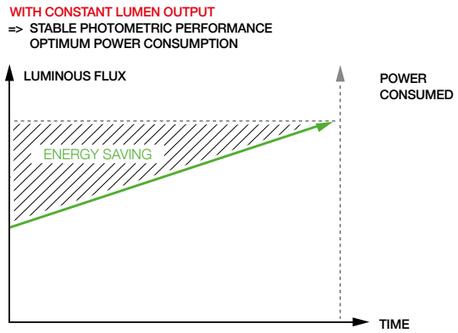
Phase control

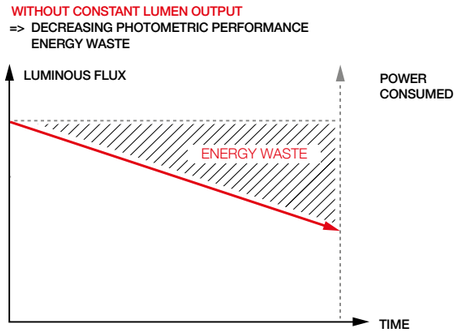
Phase control widely used for incandescent and halogen lamps dimming this analogic control method apply also to LED lamps. Because there is no general compatibility between all dimmers available on the market, Toshiba has provided a list of recommended dimmers on its website www.toshiba.eu/lighting.

CONSTANT LUMEN OUTPUT

Constant luminous flux over the life of the lamp

The drop in luminous flux due to the LED technology over the service life of the system is compensated by increasing the power input. This results in constant and uniform photometric performance differentiating strongly TOSHIBA products from standard LED systems whose lumen output drastically drops over time lighting.



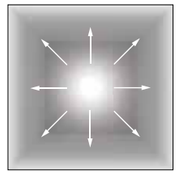


GLOSSARY

Basic Photometric Units

There are several photometric base quantities in the definition of light sources, which characterise different qualities.

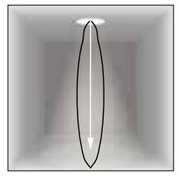
LUMINOUS FLUX (Phi/lm)



Luminous flux ϕ in lm (Lumen)

The total radiating power emitted by a light source, which the eye perceives as light.

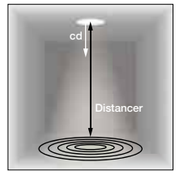
LUMINOUS INTENSITY (I/cd)



Luminous intensity I in cd (candela)

The luminous flux of a light source per solid angle. With the same luminous flux, the light intensity increases the more the light source focuses the light.

ILLUMINANCE (E/lx)



Illuminance E in lx (Lux)

A measure of lighting power per lit surface. A minimum luminance is specified for many visual tasks and must be considered in the planning of the visual task and choice of light source.

Colour Rendering Index Ra

Colour Rendering Index (CRI) is a measure of how well a light source is able to accurately reproduce colours of objects being lit respective to the colour temperature (CCT) of the light source. The higher the colour rendering index, the more naturally the colours of an object are reproduced and therefore perceived by the observer. The sun has the highest CRI of 100. Most artificial light source are below that. The colour rendering index is determined using 8 standardised test colour references.

Dimmability by trailing edge phase control

DIMMABLE

Luminaires can be dimmed very easily using trailing edge phase control. The advantage of trailing edge phase control compared with circuits in which the voltage is controlled by a resistance is that they have a very low power loss and are widely used in existing installations. The main disadvantage of trailing edge phase control is the non-sinusoidal current profile. Because current and voltage do not have the same shape, so-called distortion reactive power occurs. Shifting the current backwards compared with the voltage curve has the same effect as an inductive load, which electricity supply companies can only tolerate at low power levels. Leading edge phase control is not recommended for Toshiba lamps. Because there is no general compatibility between all dimmers available on the market, Toshiba has provided a list of recommended dimmers on its website www.toshiba.eu/lighting.

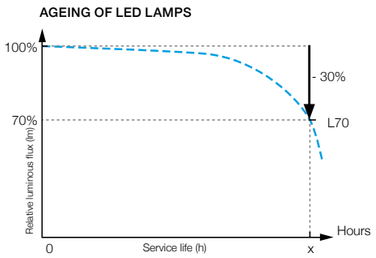
Colour temperature (K Kelvin)

Colour temperature is a measure of the colour effect of a light source. Colour temperature is defined as the temperature of a black body which belongs to a particular light colour of this emission source.
Typical colour temperatures for light sources are:

- below 3300 K = warm white, preferred for interior lighting
- 3300 K to 5300 K = neutral white, typical light colour for office, industrial and exterior lighting
- above 5300 K = cool white, especially common in exterior lighting.

L70 service life of LED light sources

LEDs are characterised by their excellent service life. Because LEDs hardly ever fail completely, the service life is defined as having an L70 value. Their useful life is considered to be over when the luminous flux has dropped to 70% of the initial luminous flux. After this time the LEDs age at a dramatically accelerated rate.
The service life of an LED light source is not set by the LEDs alone, the other electrical components and the thermal design are also a factor. Therefore the given service life varies from product to product.



Power factor λ = cos ϕ

The LED light sources need driver modules to operate which act capacitively from an electrical point of view. This leads to a phase shift between voltage and current consumption and consequently the apparent power S (given in Volt Amperes VA) has an effective power proportion P (Watts) and a reactive power Q (Volt Ampere reactive VAr). The relationship between effective power P and apparent power S is represented as the power factor λ.
