

Property of Lite-On Only

#### Features

- \* Designed for ease in circuit board assembly.
- \* Black case enhance contrast ratio.
- \* Solid state light source.
- \* Reliable and rugged.

#### **Package Dimensions**

Lamp Part No.	Lens	Source Color
LTL-10234W	Green Transparent	Green

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is  $\pm 0.25$  mm(.010") unless otherwise noted.
- 3. The holder color is black.
- 4. Specifications are subject to change without notice.

## LITEON LITE-ON TECHNOLOGY CORPORATION

Property of Lite-On Only

Parameter	Maximum Rating	Unit		
Power Dissipation	100	mW		
Peak Forward Current (1/10 Duty Cycle, 0.1ms Pulse Width)	120	mA		
Continuous Forward Current	30	mA		
Derating Linear From 50°C	0.4	mA/°C		
Reverse Voltage	5	V		
Operating Temperature Range	-55°C to + 100°C			
Storage Temperature Range	-55°C to + 100°C			
Lead Soldering Temperature [1.6mm(.063") From Body]	260°C for 5 Seconds			

Part No. : LTL-10234WHCR	Page :	2	of	6	
--------------------------	--------	---	----	---	--

Property of Lite-On Only

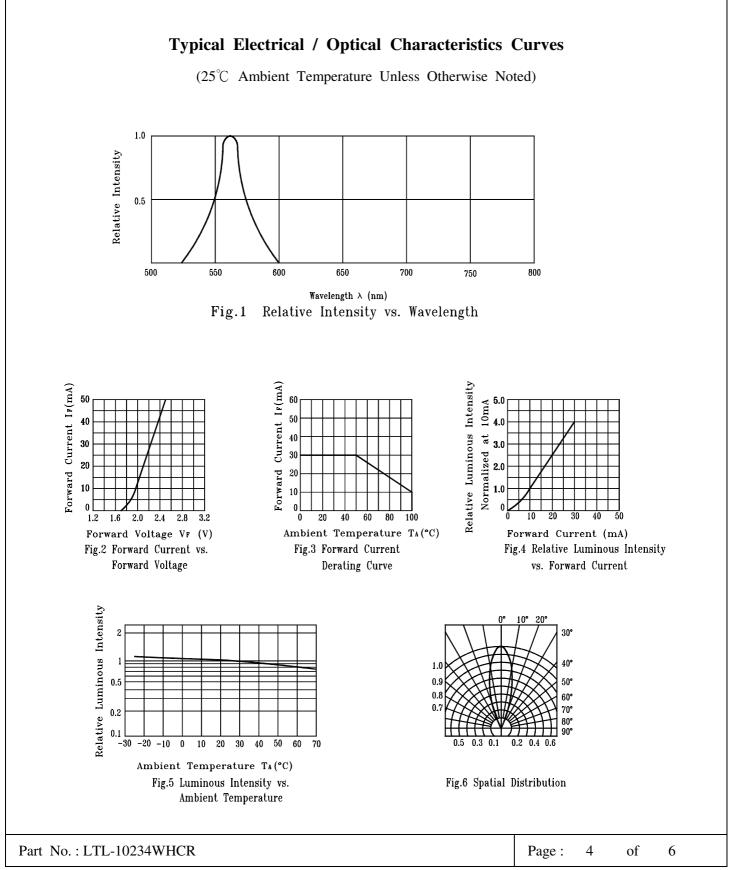

ectrical / Optical Characteristics at TA=25°C						
Parameter	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Luminous Intensity	Iv	19	60		mcd	IF = 10mA Note 1,4
Viewing Angle	2 <del>0</del> 1/2		30		deg	Note 2 (Fig.6)
Peak Emission Wavelength	λр		565		nm	Measurement @Peak (Fig.1)
Dominant Wavelength	λd		569		nm	Note 3
Spectral Line Half-Width	Δλ		30		nm	
Forward Voltage	VF		2.1	2.6	V	$I_F = 20 m A$
Reverse Current	IR			100	$\mu A$	$V_R = 5V$
Capacitance	С		35		pF	$V_F = 0$ , $f = 1MHz$

Note: 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE (Commission International De L'Eclairage) eye-response curve.

- 2.  $\theta_{1/2}$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. The dominant wavelength,  $\lambda_d$  is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- 4. The Iv guarantee should be added  $\pm 15\%$  .

## CAUTIONS

#### 1. Application limitation

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household application.) Consult Liteon's sales in advance for information on application in which exceptional quality and reliability are required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as airplanes, automobiles, traffic control equipment, life support system and safety devices).

#### 2. Storage

After being shipped from Liteon the LEDs should be kept at 30°C or less and 70%RH or less. The LEDs should be used within 3 months. They can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material. Please avoid rapid transitions in ambient temperature in high humidity environments where condensation may occur.

#### 3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

#### 4. Forming & Mounting

When forming a lead, the leads should be bent at a point at least 3mm from the base of epoxy bulb. Do not use the base of the leadframe as a fulcrum during forming. Lead forming must be done before soldering at normal temperature. When mounted through hole type LED lamp, avoid the occurrence of residual mechanical stress due to clinching.

#### 5. Soldering

When soldering, leave a minimum of 2mm clearance from the resin to the soldering point. Dipping the resin into the solder must be avoided.

Do not apply any stress to the lead frame during soldering while the LED is at high temperature. Recommended soldering condition

Soldering ironWave solderingTemperature<br/>Soldering time300°C Max.<br/>3 sec. Max.<br/>(one time only)Pre-heat<br/>Solder wave100°C Max.<br/>60 sec. Max.<br/>260°C Max.

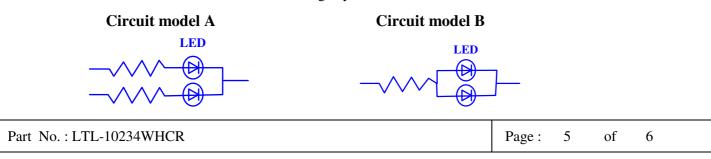

\*The material of hook type Housing is very sensitive of soldering temperature. Any increase of soldering temperature might seriously result in serious melting of the housing.

Soldering time

10 sec. Max.

#### 6. Drive Method

LED is a current operated device, and therefore, requires some kind of current limiting incorporated into the drive circuit. This current limiting typically takes the form of a current limiter resistor placed in series with the LED. Consider worst case voltage variations that could occur across the current limiting resistor. The forward current should not be allowed to change by more than 40% of its desired value.

## LITE-ON TECHNOLOGY CORPORATION

Property of Lite-On Only

#### (A) Recommended circuit.

(B) The difference of brightness between LEDs could be found due to the Vf-If characteristics of LED

#### 7. ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti- electrostatic glove is recommended when handling these LED. All devices, equipment and machinery must be properly grounded.

Classification	Test Item	Test Condition	Duration / Cycle	Referance Standard
Endurance Test	Room Temp. Operation Life	Ta= Room Temp, Ip= 160 mA / 1/8 duty, Pulse Width =1.25 ms	1000 hrs	MIL-STD-750D:1026 (1995) MIL-STD-883D:1005 (1991) JIS C 7021:B-1 (1982)
